GIANNE MARCKO G. AURE

3rd Year Computer Engineering Student

09542853459 | marckoaure@gmail.com | Cavite/Metro Manila

OBJECTIVE

Computer Engineering student seeking an internship opportunity where I can apply my knowledge in programming, computer systems, electronics, and problem-solving. Eager to gain hands- on industry experience, contribute to technical projects, and further develop my skills in hardware, software, and system development.

TECHNICAL SKILLS

Languages & Tools: Python, PHP, JavaScript, HTML/CSS, Verilog, MySQL, Git/GitHub, Microsoft Office (Word, Excel, PowerPoint)

Frameworks & Libraries: Laravel, Flask, TensorFlow / Keras, OpenCV

Core Competencies: Deep Learning, Digital Logic Design, Embedded Systems, Data Analytics, Full-Stack Web Development, Database Management

PROJECTS

Algorithmics Student Information System (ASIS) — *Full-Stack Developer & System Management Lead*

- Built a Laravel and MySQL web system that replaced manual enrollment and record-keeping, featuring role-based admin and teacher dashboards with clickable stat cards linked to filtered student records.
- Developed the System Management module (user management, activity-log audit trail, and record archive/restore) and automated encoding of 2024–2026 student records through a Python script.

Pi-Tech Smart CCTV System — *Founder, Lead Researcher & Systems Architect*

- Conceptualized and designed an AI-powered road incident detection and emergency response system for the Philippines, producing a full system blueprint and architecture.
- Directed end-to-end research on hardware integration, solar power components, and real-time computer vision pipelines to support autonomous emergency dispatch.

Self-Balancing Robot — *Project Lead, Programmer & Hardware Builder*

- Led a team in designing and constructing a self-balancing robot from the ground up, personally handling both the embedded programming and physical assembly.
- Implemented PID control algorithms to maintain dynamic balance, achieving stable two-wheel equilibrium under varied load conditions.

DO: Get the Stuff Done — Mobile App — *Co-Developer*

- Collaborated in developing a productivity mobile application, contributing to core feature coding and ensuring consistent functionality across modules.

WORK EXPERIENCE

Software Development Intern | *Algorithmics Learning Hub* June – July 2026

- Developed the Algorithmics Student Information System (ASIS), a Laravel and MySQL web application, as part of a five-member team to digitize the center's manual enrollment and student-record operations.
- Taught Python, Scratch, and robotics (UARO, AIKIRO, Robokit) classes to students aged 10–18 after passing the in-house assistant-teacher certification exam.
- Maintained IT operations through hardware troubleshooting, equipment inventory, and document processing, while supporting front-desk and marketing tasks.

Crew Member | *McDonald's Philippines* August 2025 – March 2026

- Coordinated with a team of 8–10 crew members to fulfill high-volume customer orders during peak service hours, consistently meeting store speed-of-service targets.

- Adapted efficiently across multiple stations: lobby, kitchen, and maintenance, demonstrating flexibility and the ability to perform under pressure.

EDUCATION

Bachelor of Science in Computer Engineering 2023- Present

Cavite State University – Indang Campus | 3rd Year, BSCpE 3-2

CERTIFICATIONS & TRAINING

- Google Data Analytics Professional Certificate
- Google Advanced Data Analytics Professional Certificate
- AWS Webinar — Cloud computing fundamentals and services
- Transfer Learning Demystified: Core Concepts Behind Modern Deep Learning — webinar
- CEIT-SC Webinars — College of Engineering, IT & Technology student development series
